Project Work

Global Energy Market

Global Energy Consumption

Global electricity demand keeps increasing, supported by economic growth, population expansion and the rise of digital services.

EU Market Trends

EU energy demand grows slowly (around 0.6% per year), but renewable investments remain strong thanks to supportive EU policies.

EU Industrial Usage

Industrial electricity consumption in Europe has recently decreased, because energy costs were higher due to the less stable economic situation.

Companies Information

- **Large energy group** active in Europe and Latin America, involved in power generation, networks and customer services.
- Investing heavily in **digital grids and smart technologies** to make electricity networks more efficient and reliable.
- Expanding its **renewable portfolio** through solar, wind, hydro and geothermal projects, with the goal of phasing out coal by 2027.

- One of the **leading global players in wind energy**, especially in big projects in Spain, the UK, the US and Latin America.
- **Strong financial stability** thanks to a large share of regulated electricity networks that provide steady and predictable revenues.
- Active in **sustainable finance**, issuing green bonds and integrating long-term ESG objectives into its investment strategy.

Statement of Financial Position

ENEL

■ Non-current assets ■ Current assets ■ TOTAL EQUITY
■ Non-current liabilities ■ Current liabilities

- **Total assets decreased to €187,139 million from €195,224 million in 2023**, with a contraction in non-current assets.
- Enel successfully reduced short-term financial pressure and improved its debt maturity structure.

IBERDROLA

■ Non-current assets ■ Current assets ■ TOTAL EQUITY
■ Non-current liabilities ■ Current liabilities

- **Total assets increased to €158,293 million from €150,033 million in 2023**. This growth was driven by non-current assets, with €94 million in property, plant, and equipment for heavy investment in renewable capacity and network infrastructure.

Income Statement Analysis

ENEL

Enel 2024 Income Statement Waterfall

Revenues fell from €96 million in 2023 to €79 million in 2024, due to the normalization of energy prices and lower volumes of thermal generation and gas sales.

Net profit more than doubled thanks to significant capital gains from the sale of assets.

Despite lower revenue, **EBITDA** improved significantly due to cost efficiency and better performance from grid operations and renewables.

EBIT increased thanks to lower write-downs and efficient asset management.

Income Statement Analysis

IBERDROLA

Revenues fell from €49 million in 2023 to €45 million in 2024, also reflecting lower market energy prices.

Net profit was 5.6 million euros, up from 4.8 million in 2023. Iberdrola's profitability is stable and predictable.

EBITDA rose to €16.8 million (from €14.4 million) driven by high-margin renewable and network assets.

EBIT increased to €9.7 million (from €8.9 million), supported by stable regulated returns and long-term contracts.

Cash Flow Statement Analysis

ENEL

● 2024 ● 2023

- **Operating activities** decreased due to working-capital fluctuations, but remained solid and sufficient to cover investment needs.
- **Investment outflow** dropped to €4.1 million in 2024 by selling €5.6 million in assets.
- **Financing activities** show an outflow determined by the payment of 5.1 billion in dividends to shareholders and debt repayment.

IBERDROLA

● 2024 ● 2023

- **Operating activities** remain nearly identical, confirming the stability of cash flow generation from regulated networks and renewable assets.
- **Investment outflow** was €8.4 million, mainly due to €7.6 million spent on property, plant, and equipment, reflecting Iberdrola's strong growth phase.
- **Financing outflows** were lower than in 2023, as Iberdrola secured substantial new loans to support its investment plan.

Profitability Analysis

ENEL

Indicator	2024	2023
ROE	17.23%	20.98%
ROI	5.70%	7.20%
D/E	1.53	1.59
Turnover	0.48	0.47

- Enel's profitability declined in 2024, with **ROE and ROI falling as a direct result of its divestment-driven deleveraging strategy**. Asset sales improved long-term stability and capital discipline but temporarily reduced operating returns and asset efficiency, compressing short-term profitability metrics.

IBERDROLA

Indicator	2024	2023
ROE	9.26%	8.40%
ROI	6.63%	5.70%
D/E	1.09	1.23
Turnover	1.05	0.82

- Iberdrola delivered **stronger profitability supported by robust EBITDA growth (+17%)**, asset rotation gains, and improved renewable output. Performance improved notably in Spain and the UK, driving margin expansion and supporting higher ROE and ROI compared to 2023.

Liquidity Analysis

ENEL

Indicator	2024	2023
Current Ratio	0.82	0.79
Quick Ratio	0.74	0.70

- Enel strengthened its liquidity position through a **16% increase in liquid assets** and a meaningful **reduction in short-term financial debt**. The improved liquidity base enhances financial flexibility and mitigates refinancing risk under a diversified funding structure.

IBERDROLA

Indicator	2024	2023
Current Ratio	0.69	0.82
Quick Ratio	0.58	0.72

- Iberdrola's **liquidity ratios declined due to working capital movements** linked to asset disposals and ongoing investments. Despite lower ratios, the Group maintains very strong absolute liquidity, exceeding 22 months of financing needs and supported by high-quality credit facilities.

Solvency Analysis

ENEL

Indicator	2024	2023
Debt Ratio	78%	80%
Equity Ratio	0.22	0.20
Altman Z score	0.91	0.92
Interest coverage	2.43	3.31

- Enel's solvency improved as **net financial debt decreased by €4.3 billion**, reducing leverage metrics such as the D/E and debt ratio. Although interest coverage weakened, the Group's overall credit profile strengthened, reflected in stable or improved rating outlooks.

IBERDROLA

Indicator	2024	2023
Debt Ratio	62%	60%
Equity Ratio	0.37	0.39
Altman Z score	1.08	1.12
Interest Coverage	3.96	3.24

- Iberdrola's **leverage increased due to significant investments in grids and renewables**, raising its debt ratio. However, strong EBITDA performance boosted interest coverage, and credit ratings remained stable, supported by resilient cash flows and a large regulated asset base.

DuPont Analysis

ENEL

Dupont Analysis Enel			
	Profit Margin Efficiency	Operating leverage Effectiveness	Financial leverage Leverage
ROE=	Net income/Tot sales	Tot sales/ Av. Tot assets	Av. tot assets/ Av. shareholders equity
ROE for 2024 = 17,23%	9,00%	0,4021	7,038
ROE for 2023= 20,989	4,15%	0,468	7,7468

- Enel's ROE declined as reduced financial leverage and lower asset turnover outweighed the sharply improved profit margin. The margin expansion reflects portfolio rotation gains, while deleveraging compressed the leverage-driven component of ROE.

IBERDROLA

Dupont Analysis Iberdrola			
	Profit Margin Efficiency	Operating leverage Effectiveness	Financial leverage Leverage
ROE=	Net income/Tot sales	Tot sales/ Av. Tot assets	Av. tot assets/ Av. shareholders equity
ROE for 2024 = 17,23%	12,66%	0,0341	3,9707
ROE for 2023= 20,989	9,77%	0,0309	3,5994

- Iberdrola's ROE increased thanks to higher profit margins and rising asset turnover, driven by renewable generation growth and operational efficiency. Leverage rose moderately to support the investment plan, but ROE improvement was primarily driven by operating fundamentals.

Conclusion

Strategy

Enel pushes digital innovation and renewables across Europe and Latin America. Iberdrola grows through offshore wind and stable regulated networks.

Risk Management

Enel reduces risk through wide geographic diversification and digital monitoring, while Iberdrola relies on regulated networks to secure predictable income.

Financials

Both companies maintain strong cash flows and keep investing in renewables and grid upgrades. Enel benefits from varied portfolio, Iberdrola from wind.

Both companies put **sustainability** at the heart of their business strategy. **Enel** is phasing out coal by 2027, expanding renewables across continents, and modernizing grids. **Iberdrola** leads in offshore wind (especially in UK and Spain) and uses green bonds to finance **clean energy projects** and long-term sustainable growth.
